

LOGIN MY PHONE NUMBER USER GUIDE

INTENDED AUDIENCE

The content of this document is designed to facilitate the users - managers, supervisors, and others of [Login My Phone Number](#) app for Shopify. A step by step instruction has been added to this document to help users to install this app on their Shopify stores.

This app will only work on Shopify. As a safe practice always backup your files and database before installing any app on your store. If you are looking for someone to install this app, we can do it for you as well. Just go to our store page and let our support know the order id to expedite the installation process.

Once it is installed please refer to the User Guide to help you understand how to use this app to its full capacity. If you still have questions, feel free to contact us via email at info@extendons.com.

USER GUIDE

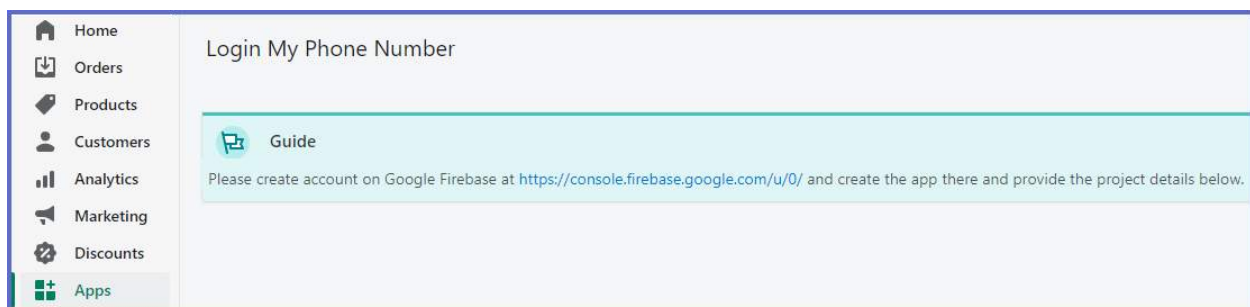

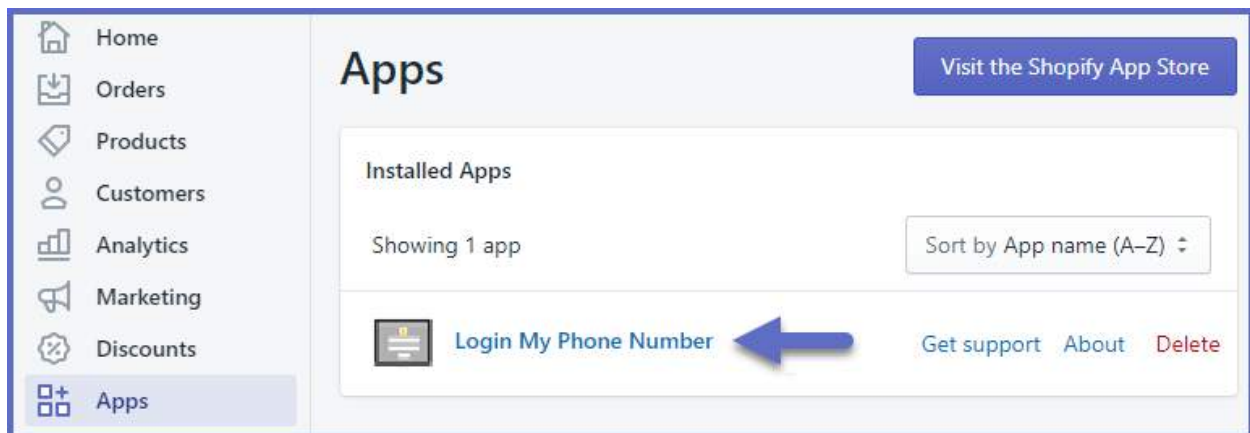

HOW TO INSTALL LOGIN MY PHONE NUMBER APP

First, at the back end, go to the [Apps](#) store. Here you will find the Login My Phone Number App. Click on [Login My Phone Number](#) app and add it to your store after accepting billing. Once installed, the user will be redirected to the app interface.

Demo Link: <https://login-with-phone.myshopify.com/>

PRE-REQUISITE FOR CONFIGURATIONS

At the back end, go to the [Apps](#) store. Here you will find the Login My Phone Number App. Click on [Login My Phone Number](#) and then you will see a message at the top of your screen for creating an account on Google Firebase.

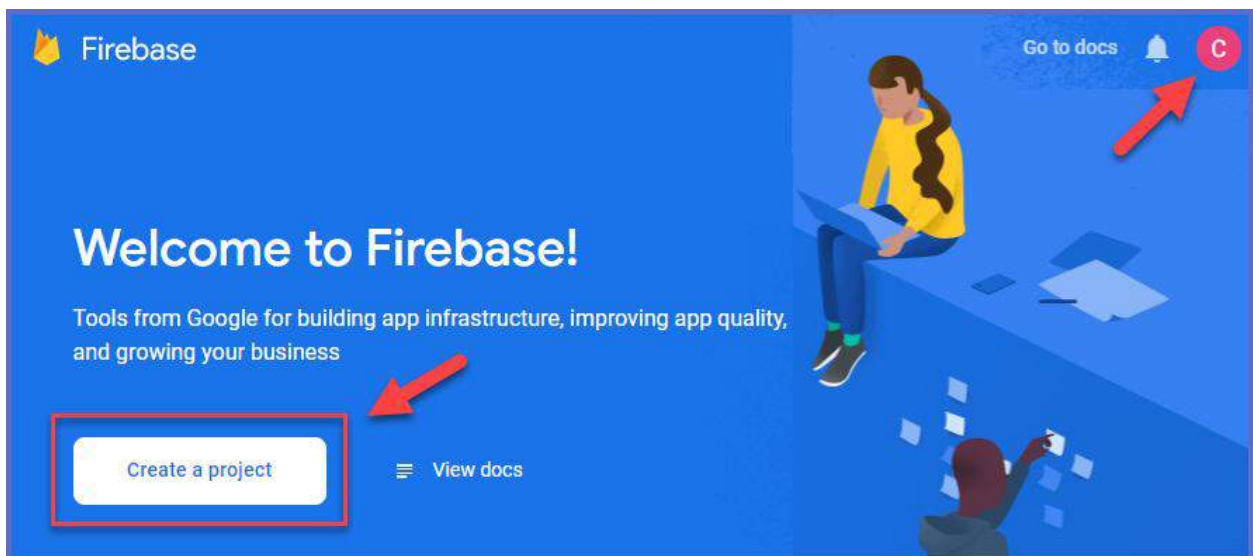

HOW TO CREATE A PROJECT IN GOOGLE FIREBASE ACCOUNT

Before configuring Login My Phone Number app, you must create a project on Google Firebase and enter the project details in the configurations section. To create a project on [Google Firebase](#), you need to follow the [steps](#) which are mentioned below:

STEPS:

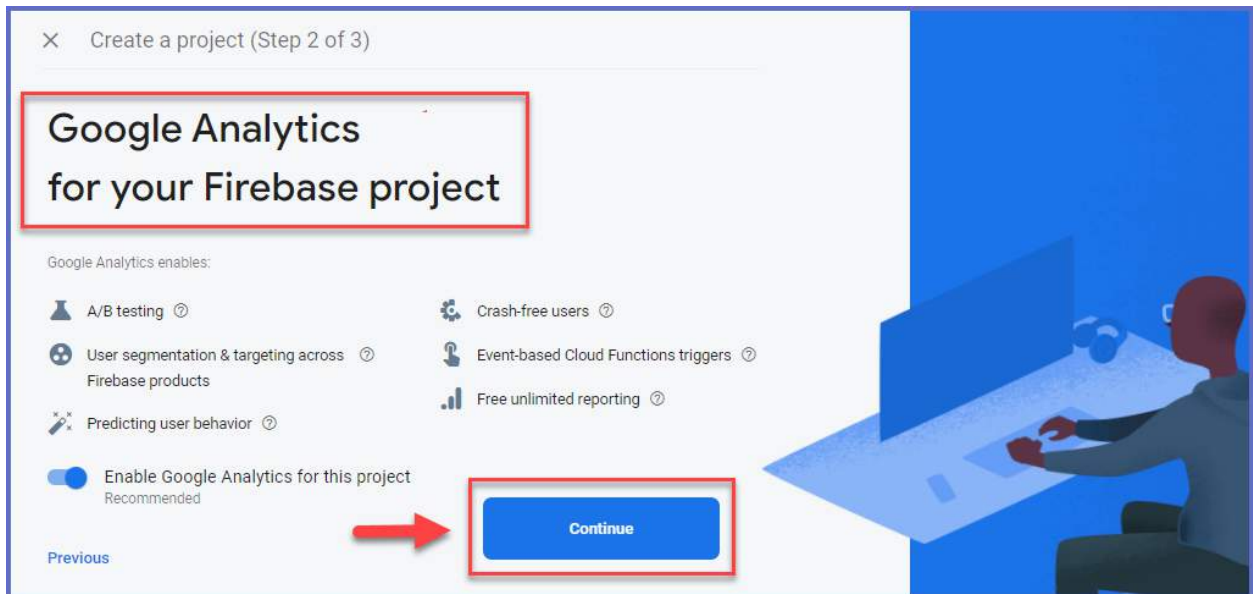

1. Create an Account on Google Firebase and Login.
2. Click on the “[Create a Project](#)”button.

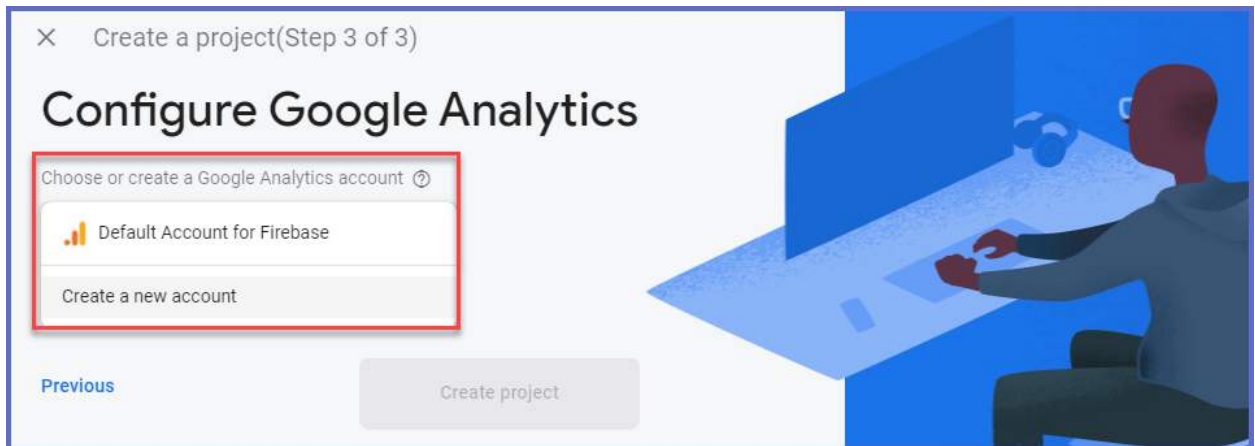

3. Enter a specific project name and click on the “Continue” button.

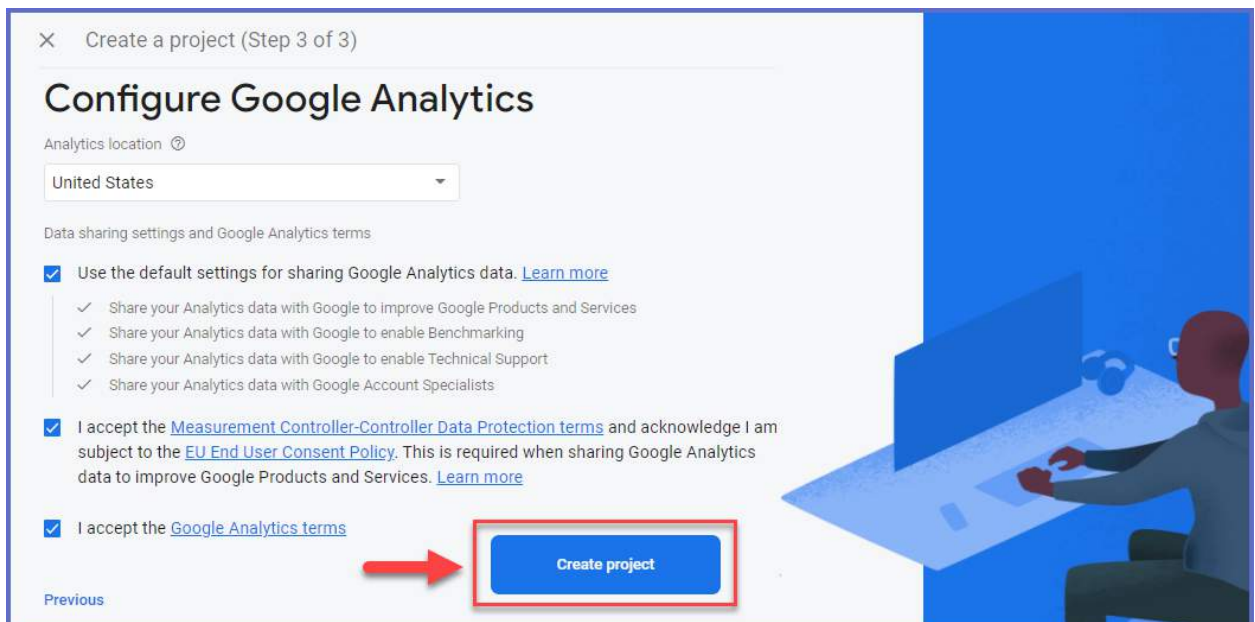

4. Now, again click on the “Continue” button in the Google analytics step.

5. Select “**Default Account to Firebase**” option in the next step and then click on the “**Create Project**” button (**Note:** Ignore this step if you don’t get this step from Firebase)

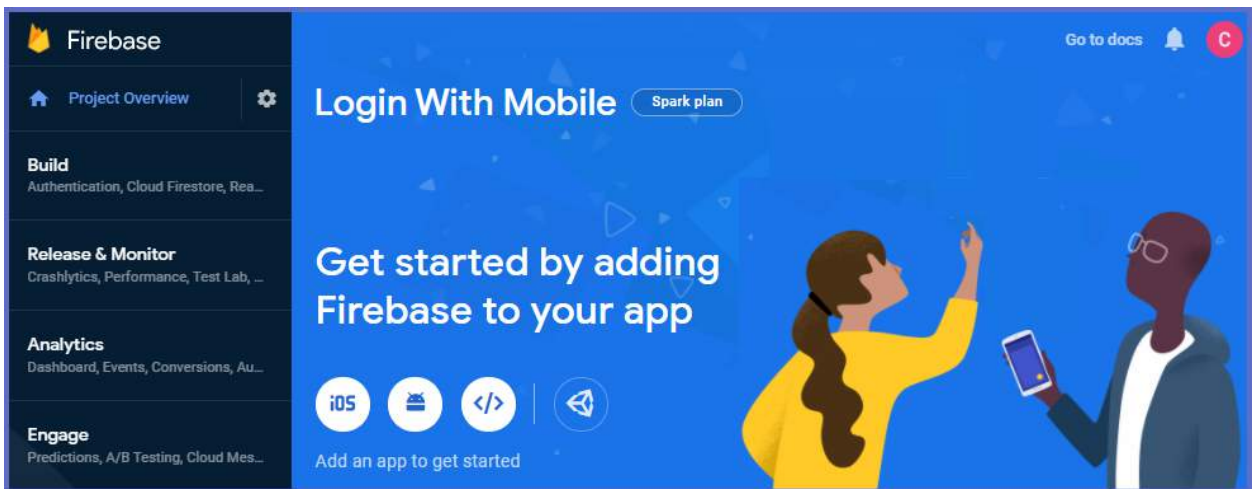

6. Check all the options in “**Configure Google Analytics**” page and click on the “**Create Project**” button. (**Note:** Ignore this step if you don’t get this step from Firebase)

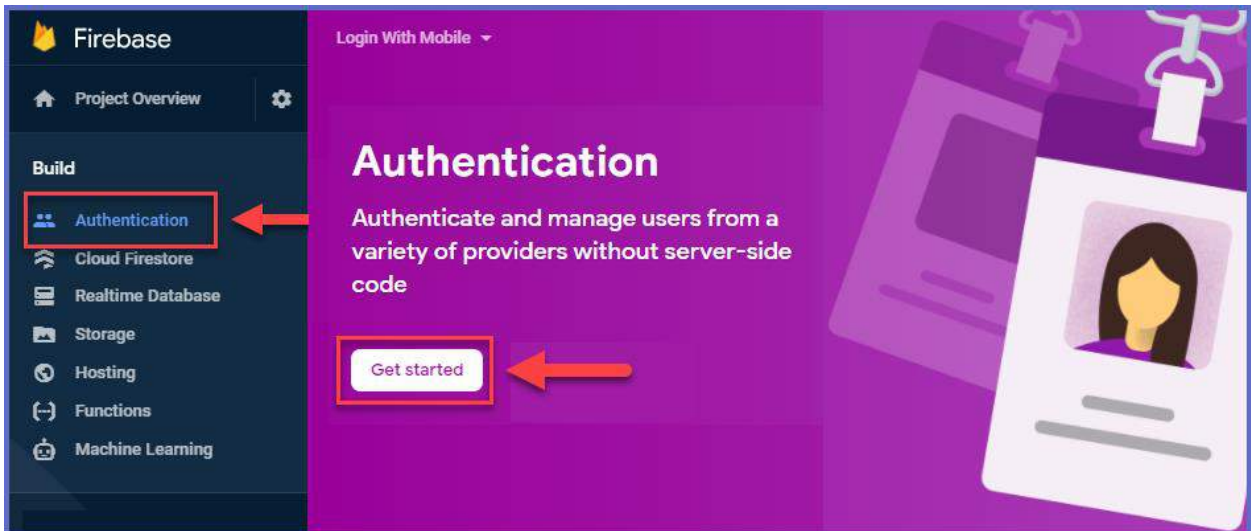

7. Your new project is ready. Press the “Continue” button.

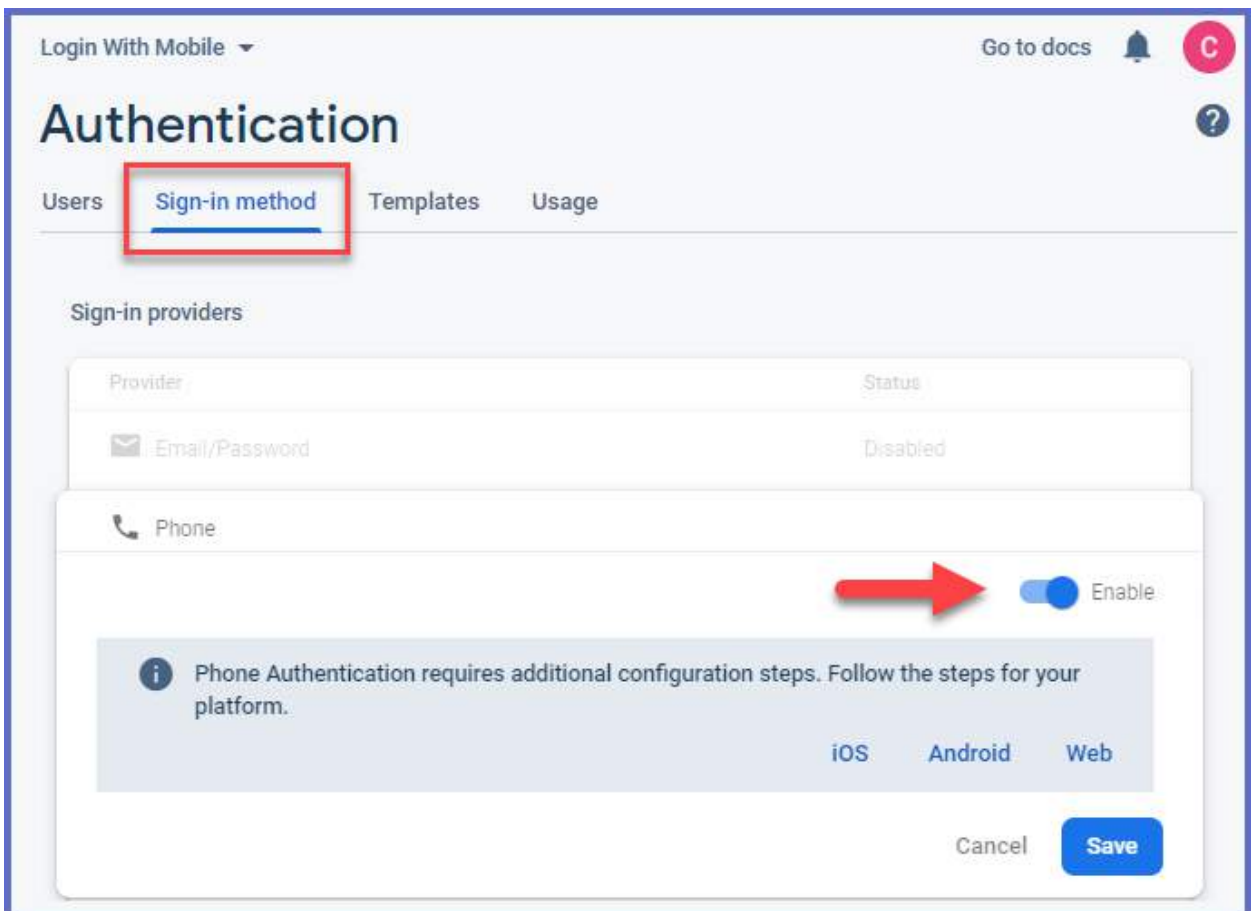

8. Now you can see your project dashboard.

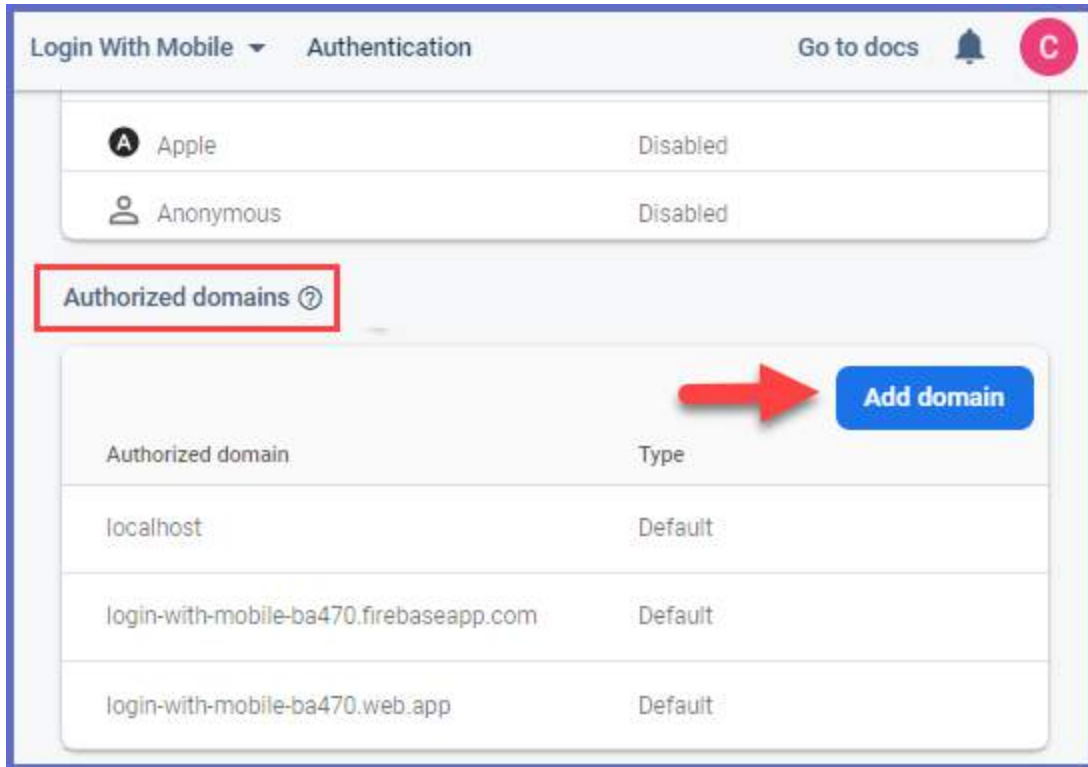

- Click on the “Authentication” button available in the left menu and then press the “Get Started” button.

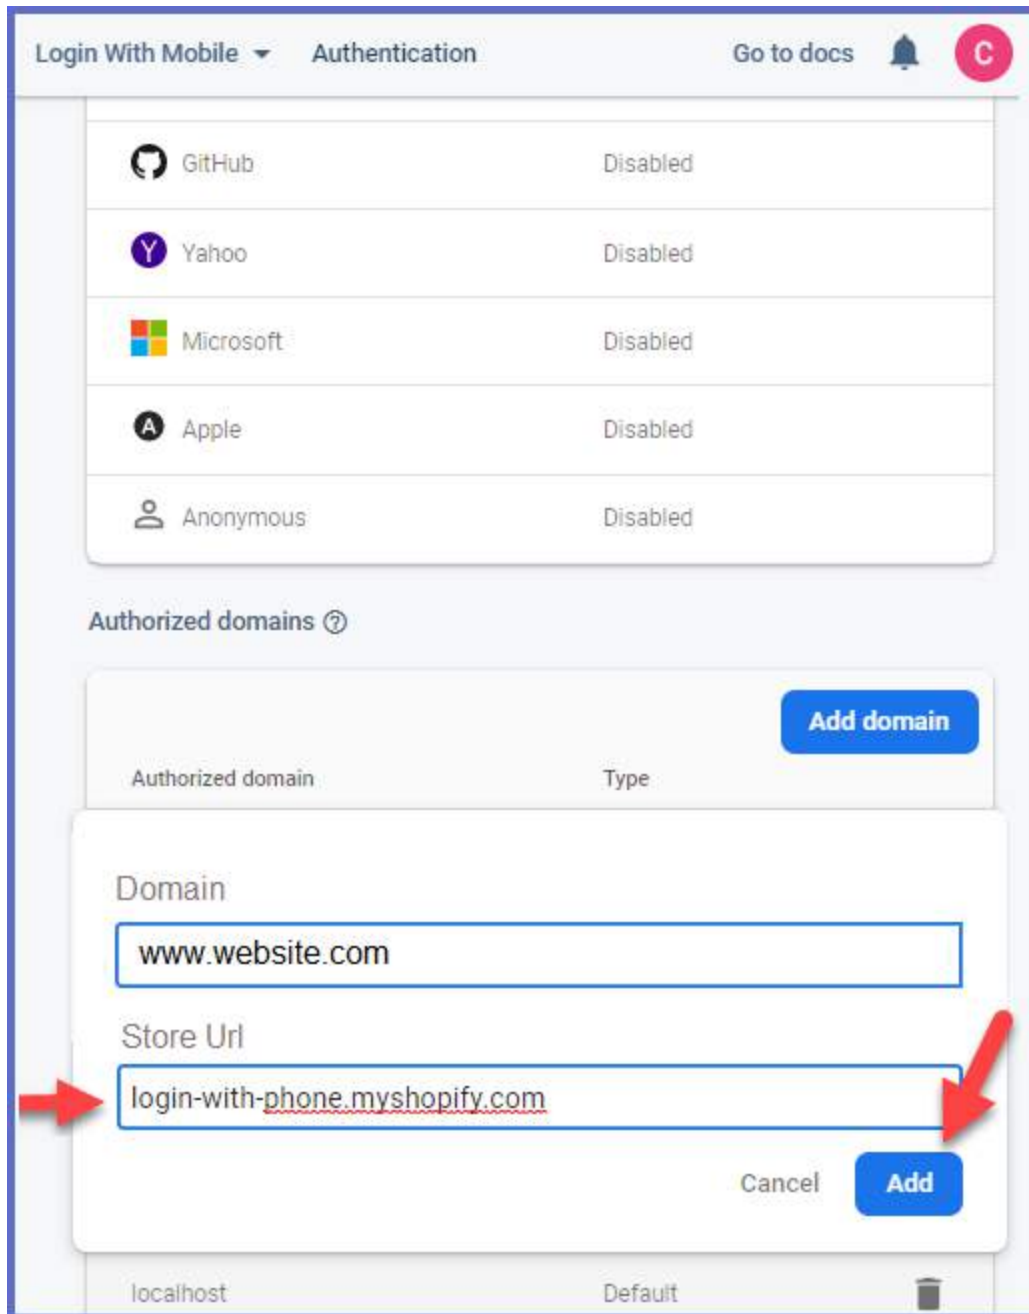

- Here navigate towards the “Sign-in Method” tab and enable the “Phone” option.

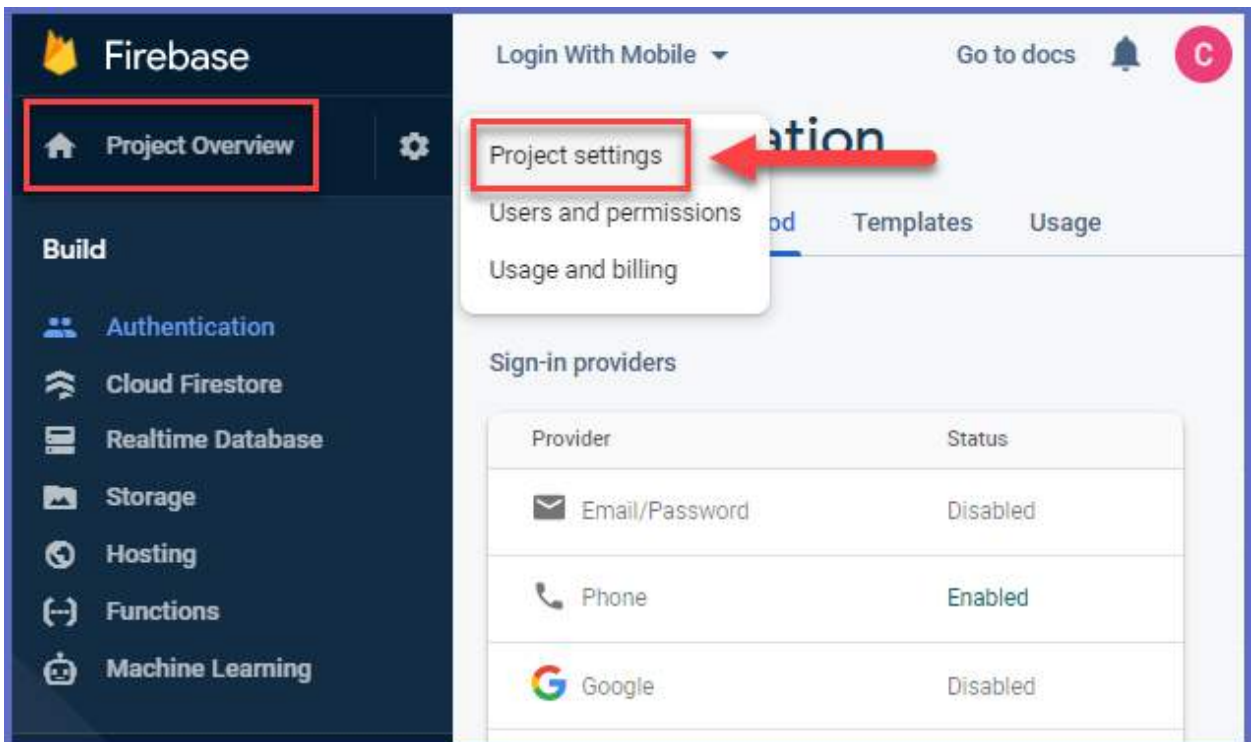

11. Now scroll down on the same page and click on the “**Add Domain**” button in the **Authorized Domain** section.

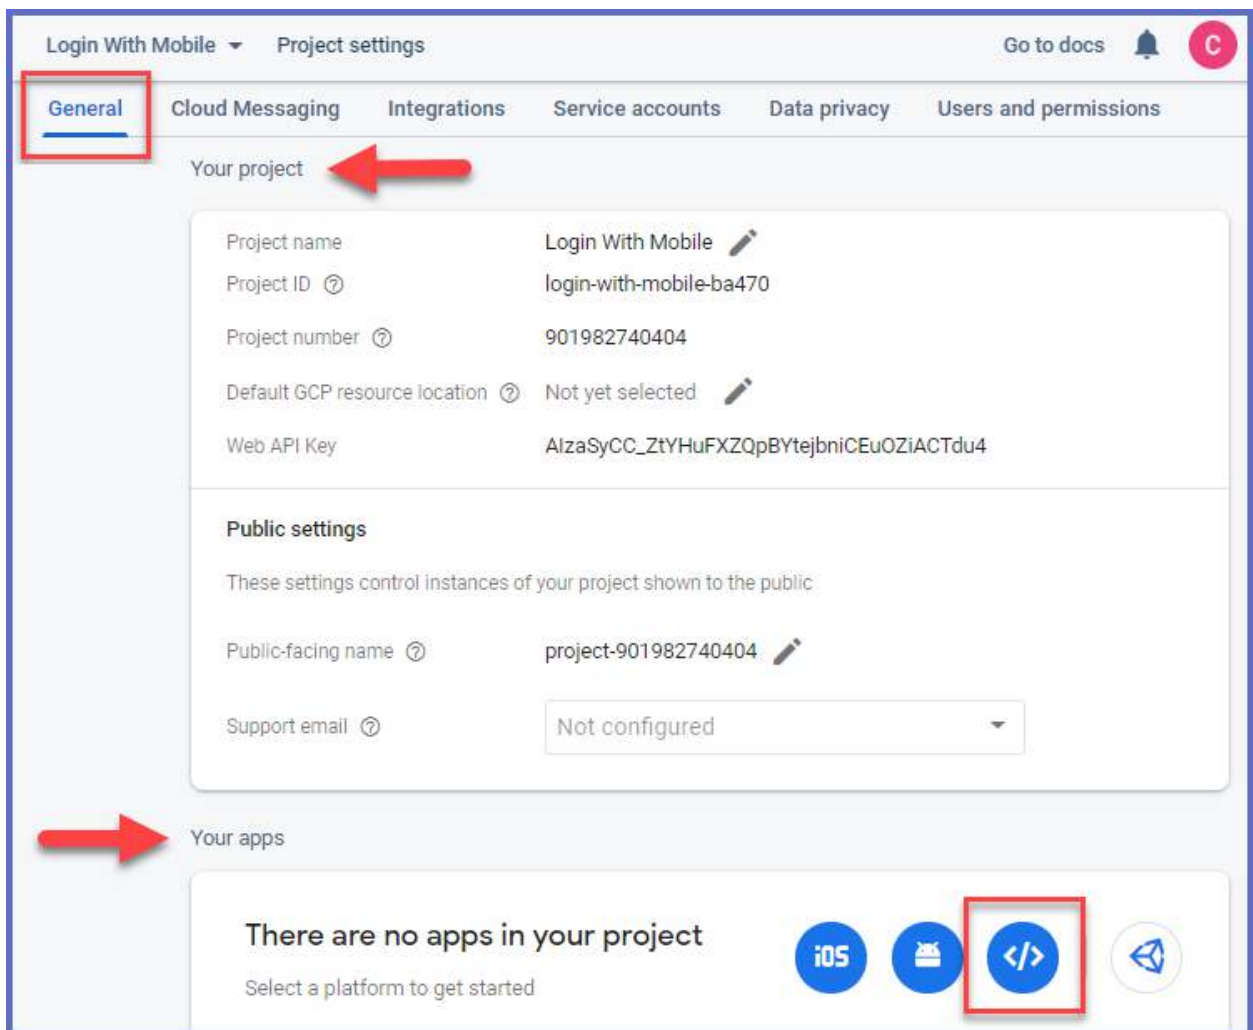

12. Copy your website URL here and “Save” it by clicking on the “Add” button. Here you can add two web url i.e. your domain name and store name url as well

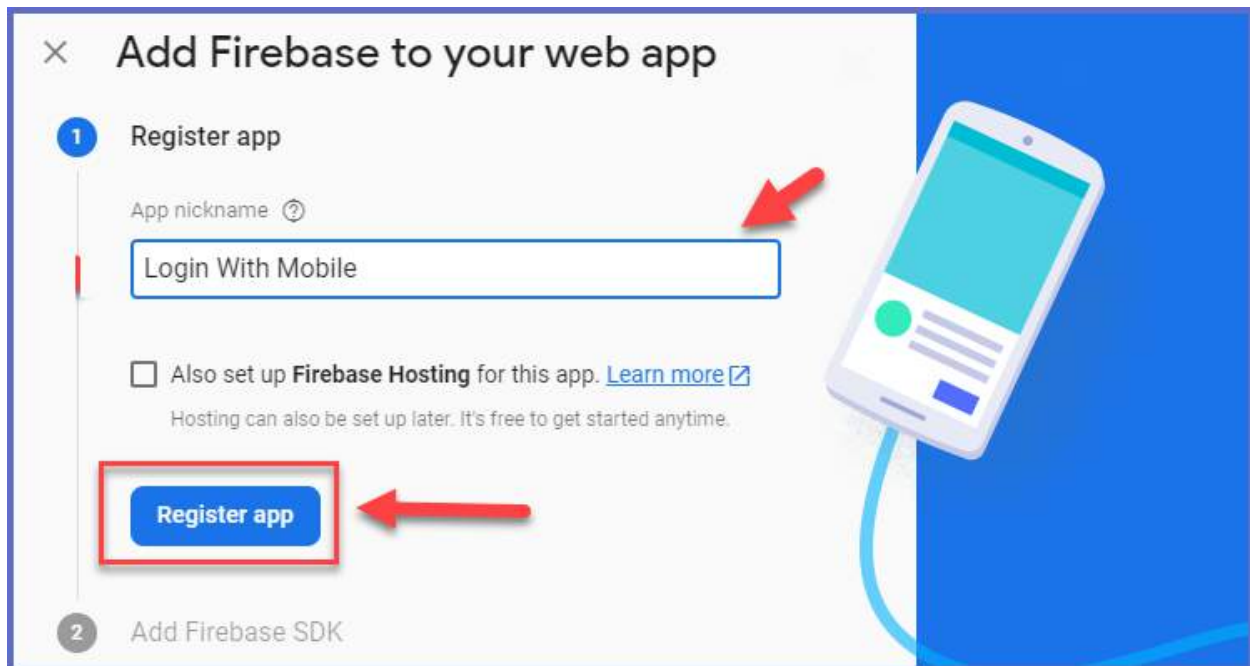

13. Now click on the project settings icon placed after “Project Overview” and choose the “Project Settings” option.

14. In the “General” tab, move down to the “Your Apps” section and click “(</>)” icon to create the app.

15. Select the name for your app and press “[Register App](#)” button.

16. Your app script is ready. Now press the “[Continue to Console](#)” button.

Register app

2 Add Firebase SDK

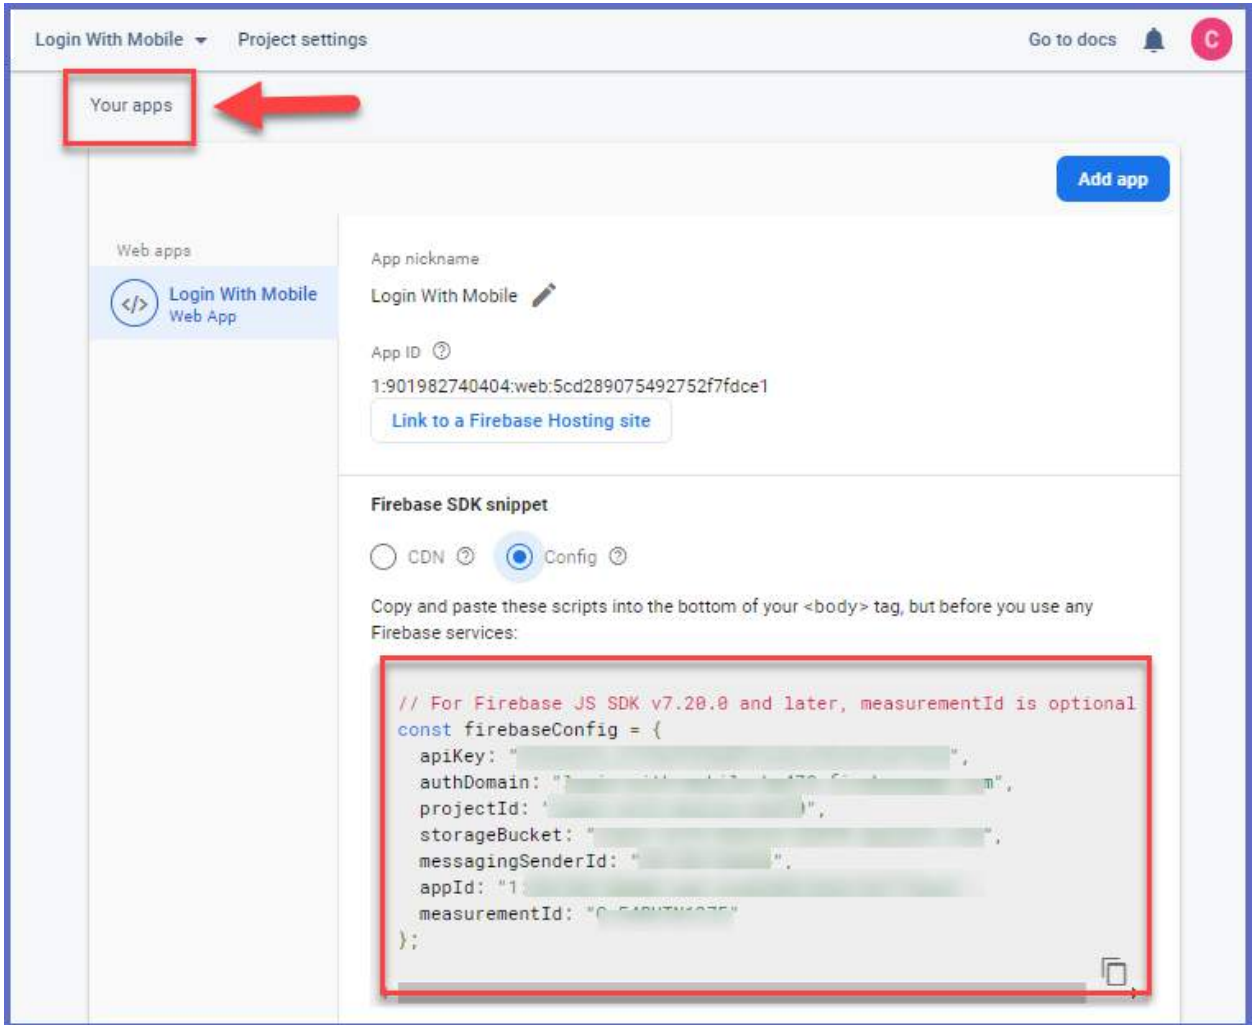

Copy and paste these scripts into the bottom of your <body> tag, but before you use any Firebase services:

```

<!-- The core Firebase JS SDK is always required and must be listed first -->
<script src="https://www.gstatic.com/firebasejs/8.2.4/firebase-app.js"></script>
<!-- TODO: Add SDKs for Firebase products that you want to use
https://firebase.google.com/docs/web/setup#available-libraries -->
<script src="https://www.gstatic.com/firebasejs/8.2.4/firebase-analytics.js"></script>
<script>
  // Your web app's Firebase configuration
  // For Firebase JS SDK v7.20.0 and later, measurementId is optional
  var firebaseConfig = {
    apiKey: "AIzaSyCC_ZtYHuFXZQpBYtejbniCEu0ZiACTdu4",
    authDomain: "login-with-mobile-ba470.firebaseio.com",
    projectId: "login-with-mobile-ba470",
    storageBucket: "login-with-mobile-ba470.appspot.com",
    messagingSenderId: "901982740404",
    appId: "1:901982740404:web:5cd289075492752f7fdce1",
    measurementId: "G-E4RVTN127E"
  };
  // Initialize Firebase
  firebase.initializeApp(firebaseConfig);
  firebase.analytics();
</script>
    
```

Continue to console

17. Now you can see all the needed details in **“Your Apps”** section. Just copy these details in **“Login My Phone Number App”** in Shopify.

HOW TO CONFIGURE LOGIN MY PHONE NUMBER APP

At the back end, go to the app page. Here you will find the list of all the apps running on your store. Click on the [Login My Phone Number](#) app to continue. Here you will find the four types of tabs i.e. settings, firebase, labels & fields, and message.

SETTINGS

Click on the first [settings](#) tab here you can configure the following settings.

- **App Settings:** Option to Enable or Disable the app
- **Login Form:** Option to hide the default login form from store
- **Resend Code Button:** Option to Enable or Disable the resend code button
- **Code Expiration Time:** Option to Enable or Disable and set code expiration time i.e. 1, 2 , 3 ... 60 minutes
